

I wish to express grave concerns about permitting BPL to deploy and operate.

My concerns are based on 20 plus years of radio education, training, license and experience. I have concluded a meta analysis of the literature published in comments regarding this matter, examined engineering findings in the field, viewed videos of radio receiving equipment receiving interference from BPL, and determined that such a deployment would present a serious and grave danger to life, limb, property, and person due to the certain interference with licensed radio services upon which the first responders and the populace rely to handle emergency and routine matters of consequence to citizens in this country. There is no other conclusion possible than to know with certainty such interference is expected and will occur.

The forgone conclusion such interference will occur is revealed in the naive recommendation offered to protect existing licensed operations through selective filtering of the BPL signals. This recommendation is technically impossible and politically naive to believe such an approach viable. The only selective filtering which will eliminate any interference to existing licensed operations is to filter BPL entirely so the BPL service emits absolutely no signals at all at any power level on any wire, radiator, or emitter.

This entire legislation must be immediately and irrevocably halted. The American public depends upon your vote to say "No" to BPL. The media attention of a single tragedy caused by interference from a service authorized admitting that interference would occur constitutes an unconscionable exposure of the American public to loss to life, limb, property, or person. Further such an informed decision to place the American public at risk is political suicide.

In conclusion, the quagmire BPL would create in complaints and actions necessary to rectify interference, which admittedly would occur, will significantly deplete the finances of the regulatory body that must hear and mitigate these matters. Perhaps this is a goal of said regulatory body.

Defeat BPL before it has a chance to defeat you.
