

While I support increasing and enhancing technology options for increasing Internet bandwidth, I'm concerned that your proposal for Broadband over Power Lines (BPL) hasn't had sufficient studies to measure/control the amount of RFI that is likely to be generated by this technology.

While the energy industry is salivating over the potential revenue in leveraging their existing infrastructure, please hear the voice of the people and take these steps slowly and prudently. The energy industry should be focused on prevent grid collapses like the one from last summer in the Northeast.
