

Broadband Over Power Line (BPL) produces severe broadband Radio Frequency Interference (RFI) to the licensed users of the HF band. No band-aid exists to fix RFI produced by BPL.

The level of RFI produced by BPL is counter to FCC and international communications policy. Facts based on real measurements lead the ARRL, FEMA, military advisors, and your peers in other nations to the same conclusion. Please do not approve BPL.

Sincerely,

- Jim Henry, Electronic Engineer and AJ6IM
