

Please protect my amateur radio license and the bands that I operate on by restricting interference from BPL on the spectrum. It's taken years to develop a group of amateur radio volunteers to help in the event of a disaster to provide emergency communications for local law enforcement, fire departments, Red Cross and the National Weather Service to name a few, and now watch this group get undermined by having harmful interference on the bands below 30mhz. Please intervene and not allow harmful interference on the spectrum I'm licensed on and the same spectrum that I'll be providing free emergency communications on. This spectrum is critical for emergency communications. Please keep this in mind, as I'm speaking for the entire group of the Marquette County ARES/RACES group.

Brian Martin KB9PCU  
Marquette County ARES/RACES  
Emergency Coordinator
