

Dear Sir or Madam,

Up until now, I have reserved comment about BPL as I have no experience of the kind of interference it can cause. Today, a fellow amateur radio operator sent me a web page address of ARRL high frequency tests in the vicinity of BPL. I was shocked at the amount of interference demonstrated. The page is: http://216.167.96.120/BPL_Trial-web.mpg . If this is representative of the state of HF communications in the vicinity of BPL, then I fear BPL will cause great harm to HF communications I am afraid we will be polluting yet another valuable resource, our radio spectrum.

Sincerely yours,

Walter S. Midura Jr.
