

I have been a Amateur Radio Operator for 25 years now.  
I am strongly opposed to the use of BPL (Broadband Powerline) on our nations electrical grid. Power lines are not a balanced system and will radiate RF throughout the nation. This will destroy the Amateur Radio servie which is a natonal resource of trained volunter communicators who help homeland seurity with emergency communications. BPL has allready been rejected in other countries because of its tecknical interference problems with radio services. I strongly urge the FCC to reject BPL and explore other tecknologies such as Fibernoptic systems that wont destroy our HF radio frequencys.
