

I oppose BPL as a polluting interference to the shortwave spectrum. BPL is a fraud because it is not true broadband. Recieving data at 300-500kbaud/sec may fit the government's antiquated definition of broadband, but at that slow rate it will never help provide true usable broadband access. You need at least T-1 speed now and in 3 or 4 years you will need at least a 20 mb pipe. Stop the fraud!
