

To whom it may concern,

As a licensed amateur radio operator (KF4ZE), I oppose Broadband Over Power Line. My concerns include the likelihood of unacceptable emission levels affecting the amateur radio service, shortwave broadcast reception, and other noise sensitive HF spectrum use, and that rather than providing access to target rural areas (for economic reasons, BPL is not feasible in rural areas), BPL will rather increase emissions in urban areas where it is more likely to be deployed (areas served by other broadband technology).

Thank you,

Doug Maukonen
