

BPL is not true broadband as it can not deliver voice, video, data at the same time. It does however have the potential to interfere with other RF technologies - for example first responders could find themselves unable to communicate when they need it the most. Until there are technology break throughs and/or applications of the technology that improve its throughput and render it non-interfering - It is my opinion that it should remain an ongoing experiment and not be given any legitimacy by the FCC.
