

I have read the Broadband over power line docket-03-104. I would like to comment that I totally disagree with the conclusions and am disappointed in the FCC for even considering BPL. One statement "we cannot let unsupported claims stand in the way of such an innovation as BPL systems" seems totally ridiculous to me because those claims are supported by legitimate tests, which the FCC should really be doing themselves. I see whole countries, including Japan and some european countries, have rejected BPL because of the interference it would create to licensed services. I think this country should follow suit and also ban BPL. Thank you and I hope you make the right decision.
