

This is not the way to deliver broadband. The electric company can barely keep the powergrid running now, let alone with broadband internet. Living here in Hobart, with out access to broadband, I still can't see any since in destroying or precious radio spectrum for something that can't possible beat 29.95 that SBC offers DSL service for in price. I think that the phone lines and hardwire is the only way to go for something that critical. BPL has already been proven deadly to RF spectrum and given for dead in other countries. Are we that arrogant that we must figure that they just didn't know what they were doing. I will wait for the cable to deliver braodband, which they will eventually. I just can't beleive that BPL can beat the reliablity, and price of other services.
