

Please put me on record as being AGAINST the deployment of BPL. As a ham radio operator, WB3DYE, I know the system as proposed will cause harmful interference to much of the HF spectrum. As you know my ham radio station when transmitting even 100 watts, will also disrupt the BPL signals going into my neighbors personal computers. This idea as proposed WILL NOT WORK, cause all kinds of problems for users of the HF spectrum, including the Federal Government, and disrupt communications between personal computers and the Internet when a licensed station transmits RF in the vicinity of the BPL power lines. If the FCC approves the use of BPL then it's time to replace the FCC board members!
