

I am very excited about the potential that BPL has to offer as I cannot get broadband at my location. But I am very, very nervous as to what this will do to my main hobby, Amateur Radio. I do a lot of low power HF communications and even a small amount of interference can cause me to miss many contacts.

I also belong to Amateur Radio Emergency Services and provide assistance when needed and participate in many drills on HF. Any degradation of reception during these events can cause very serious results.

Please keep this in mind when making your decisions.
