

To whom it may concern:

It is already a nuisance to have vertical interferenc generated by near by power lines to the extent that my vertical antenna is nearly unusable. Having BPL would only increase the noise to extent that horizontal antennas would be affected and thereby make communication with other ham stations very difficult. In times of necessary emergency communcations this would be disasterous. Emergency communications is part of our purpose as ham radio operators. I ask that BPL not be allowed as this would only add to already high levels of line noise in our radios.

Thanks,

duanew
