

Dear F.C.C. Executives,

Please note that I am definitely NOT in favor of allowing utility companies or other power corporations the ability to provide BPL (broadband powerline) services to the public.

There is well documented proof provided by the ARRL (amateur radio relay league) that indicates significant radio interference will be caused by the deployment of this service.

In addition; the effective deployment of this service will be hampered considerably by lawful interference caused inadvertently to this service (BPL) by legally licensed radio operators.

The harmful interference will not be limited to fixed station operations; BPL has caused measurable interference to stations operating mobile as well. Legally licensed radio operators may also inadvertently interfere with BPL, causing complaints and public nuisance.

BPL service should not be allowed to proceed. Please stop this proposal now, before it gains any more momentum.

Respectfully submitted,

David E. Hassell Sr., N5IW
