

I "do not" support the broadband over power line (BPL) system that is being proposed. This will cause of significant HF interference and would substantially alter any and all HF communications. This proposal should be stopped immediately and there should be "no way" that our FCC would allow this to move foward and become reality. This is not in the best interest of our country nor is it in any interest of those who use or rely on our HF airwaves. They are too valuable of a service to be rendered usless by this technology.!

Please stop this proposal from becoming a reality. Do not support it!
