

Dear FCC:

The power lines in this country, as they now exist, produce noise and static in excess due to neglect from the power companies. BPL would destroy meaningful communications over the high frequency spectrum for the military, Broadcast stations, Amateur Radio, and Radio astronomy on an unprecedented scale. Even if it can be done by prudent notching, filtering, and signal processing, the power companies would not maintain these systems properly. The focus of the FCC should be now as in it's inception to protect the radio spectrum from interference, not promote it. This was the purpose of creating the FCC in the first place. Thank You for your taking the time to read this. Yours truly Gary A. Grabenstein.
