

I am against this proposal of the commission. However what is most disturbing is the commission's argument of antenna orientation to avoid possible RF interference when the commission either refuses to acknowledge or has not considered that the commission's refusal to extend PRB-1 to covenants; will in hundreds of thousands of cases, makes it impossible to orient hidden attic antennas.

If the commission enacts this regulation I will file the appropriate action for permanent stay based upon this inconsistency of the commission's actions. I contend that the commission may not consider antenna orientation in any manner as a basis for this regulation.
