

I request the Commission thoroughly investigate the reports of RF interference due to a BPL pilot in the area of Briarcliff Manor, NY. In addition, it appears that other technically-advanced nations (i.e. Japan) have explored and abandoned BPL as a means of effectively getting broadband to their citizens. Indeed, Japan and many other countries have ensured widespread broadband availability without using BPL. Please ensure that these issues:

- 1) BPL RF interference and
- 2) BPL's effectiveness compared to other technologies

are adequately explored and addressed.

Thank you for your consideration.
