

The US is presently at war with foreign terrorists. Tis is not a "war on terrorism," as the Bush admin would have you believe, but a war WITH terrorists, sabateurs, and foreign agensts bent on our destruction. The ability to communicate, on an ad hos basis, which is what FCC licensed Radio Amateurs do, should not be compromised in any way whatsoever by BPL interference. Wait until the war is over before permitting BPL! By that time, the BPL technology will be superseded by higher bandwidth optical systems anyway. It's time to put a halt to the dumbing-down of America---and PBL is an ill-conceived idea that will thwart the ability to fight this war to success.
