

I am writing to place my vote against BPL for the following reasons:

1) Major radio frequency interference in the entire HF range. If you have any doubt about this fact please go to the following web site and view the video link:

<http://www.arrl.org/announce/regulatory/et03-104/rep-comments-exhibit-a.html> This video clearly demonstrates in real terms how extensive this BPL interference will be if BPL gets fully implemented.

2) Along with interference to Amateur Radio communications the same interference will affect FEMA, MARS, Aviation, Military HF operations.

3) The destruction of Short Wave listening opportunities.

I am not an engineer, all the technical numbers can be mind numbing and can lead to the question "What do they really mean". The video link above shows what the real world interference will be and leaves no question what will happen to the HF spectrum. The video cannot be spinned with soothing words from the BPL industry.
