

I am concerned that the few in this case (being ham radio operators) are going to and do, save the many. Ham radio ops need to know that they are going to be able to continue to help the public via hf radio. Hams volunteer they very expensive equipment,time, and some times lifes in time of local, national disasters. With more and more threats on our country from all kinds of natural and now terrorest threats, hams are need more then ever. HF ham radio is not going to be use to anyone when noise is too great. From the tests that I have heard and read about.. may was well throw my radio in the trash! The few is going to save the many!
