

It's difficult enough to listen to overseas shortwave broadcasts nowadays with foreign gov't funding cutbacks, elimination of stations and broadcasts in English, interference from light dimmers, power tools, fluorescent lights, computers, etc, etc, etc. Now you are proposing to let Big Business broadcast over the power grid. Wonder what THAT will do to reception? There is NO "cable-SW radio". Not enough \$\$\$\$. Guess the voters don't count, except at election time, and NEVER AT ALL to a Bureaucracy, such as the FCC. "Government of the People, By the People, and For the People" is still a joke. The Director needs a "jester's cap" to wear at Congressional hearings.
