

Broadband over Power Line is a bad idea, the powerlines will be antennas. The lack of complaints so far in the trials are due to the fact that they have been small and in small towns and rural areas.

Part 15 rules need to be tightened so other services do not suffer, be it Police and Fire or Amateur Radio, the interference files of the BPL providers must be open to the public and the burden of correcting the interference must be on the BPL provider.

I live in rural SC, I have internet and no High Speed Connection, if I wanted it I could get it through Direct TV, cheaper and with less of a chance of interference than through my powerlines, which are by electronic theory more or less a Marconi antenna system. BPL PROVIDERS MUST BE RESPONSIBLE TO FULLY CORRECT THE INTERFERENCE THAT THEY CAUSE.

Thank you
