

I am concerned about the BPL effects on the HF frequencies. Interference with broadcast HF frequencies would restrict choice for listeners and force listeners to listen to programs from a limited number of broadcasters.

I am also concerned about interference to the Amateur radio operator and FEMA emergency operations. I am a licensed Amateur Radio operator and a Registered Electrical Engineer in the State of California.

I urge further study of BPL including use of studies from other countries such as Japan. BPL appears to be a major interference generator.
