

Dear sirs,

You can change the future.

Your decision regarding the approval or disapproval of Broadband Over Powerlines changes the future of communications around this country. Emergency and Intensive Care Units in local hospitals cannot afford such interference risk. Nor can the emergency radio operations of Storm Spotters; search and rescue groups; law enforcement radio; fire and rescue radio operators; airlines; military radio operators; Amateur radio operators [Who serve as a backbone in the emergency communications network of this nation]; along with so many other applications that would be effected by this interference.

Choose wisely, and let the commercial money find another way!
