

I strongly urge the FCC to dis-allow all BPL use because of interference to High Frequency radio communication services, including the amateur radio service. Amateur radio serves a vital and necessary function to the public in times of emergency. The interference to HF caused by BPL has been shown to be very severe and is difficult if not impossible to eliminate. The utility companies have not shown a willingness to resolve the technical interference issues. There are far better types of high speed internet distribution systems available which do not cause harmful interference, so there is no reason to allow BPL.
