

As an amateur radio operator I'm concerned with the possible interference issues with BPL. I live in a rural area with a low noise floor. Even a SMALL increase in the noise floor on the amateur radio bands would render them useless. PLEASE take this into consideration when making further decisions on BPL.

I'm afraid if BPL is implemented, the "Jennie will be out of the bottle" and impossible to discontinue the service when interference occurs.

If BPL becomes a reality, please be sure to put the interference mitigation responsibilities onto the BPL service provider, not on the services being interfered with!

If interference cannot be mitigated 100%, the service MUST BE TERMINATED!

Thank You
