

In this age of potential terror attack we need to have every resource in place to supplement emergency communications. As always, ham radio is treated like the poor sister until it's the only way to get through, then it's suddenly our shining star.

If BPL adversely affects ham radio, then it becomes less of a valid fallback. I can't comment from a technical point of view, but it is my opinion that even if there's a remote possibility that BPL will make HF communications less reliable, then by promoting it we are diminishing our nations readiness.

Please oppose BPL.

Thanks;  
Neil
