

Ladies and Gentlemen -- I still believe that there exist more effective methods to transmit 'internet broadband', which are already in place. The interference to all HF Radio systems should be protected by you, rather than allowing transmission of signals on open wires. Do you really have 'Homeland Security' in mind, or are you going to allow this unacceptable interference to become existant? Please refuse to allow BPL, as many, many other Nations have already enacted!

Thanks for your consideration - Eddie Manley KD5JGB
