

After much research, I believe that BPL would seriously hinder all HF communications--including military, shortwave and amateur radio. In addition, as a radio telecommunicator and technician for the Highway Patrol, I am concerned about BPL causing interference to our low-band network on 42 MHz. BPL then poses an officer safety issue nationwide for those agencies on low-band. Interference to licensed users is inevitable despite filtering and other services such as wireless hot spots and fiberoptics should be researched instead. Thank you.
