

Although I feel BPL is a bad idea and unnecessary, since we already have plenty of Broadband options including, DSL, Cable, Wifi, and Satellite I know we cannot ban its implementation.

The FCC needs to establish performance standards for BPL interference mitigation, that offer any real protection to licensed services, the rules must require that interference be resolved immediately and there must be severe enforcement penalties for failure to resolve a complaint in real time and for failure to maintain the database.

Please protect the valuable HF spectrum, from BPL, its too much of an important resource, not just for Hams but for Shortwave Listeners, Marine Radio Operators, individuals syncing their clocks with WWV, etc. HF is a unique and valuable part of our Radio Spectrum offering so much for all citizens.
