

I am a licensed amateur radio operator and I am very concerned about the ability of power companies to keep HF emissions from BPL within Part 15 guidelines. The FCC has said that it will mandate that Part 15 rules be followed, but I really doubt will be the case when 40 homes lose their Internet access when one amateur station begins transmitting. I want to voice my opinion that BPL is not necessary in light of cable, DSL and wireless offerings. HF is important to the public through military, government and amateur operations, even though the public may never know all that we do for them in terms of emergency communication.
