

I support the additional requirements for BPL operation under part 15 contained in this NPRM. However I do not believe they go far enough to prevent BPL from causing interference to existing users of the HF spectrum. As the NTIA suggested I would support additional measurement specifications and tighter limits on interference.

I believe BPL to be a "flawed" technology, and would encourage the commission to encourage the use of other technologies for broadband access, and discourage the use of BPL.
