

I am concerned that BPL will interfere with Amateur Radio communications and Radio Control model aircraft flight. Amateur Radio is a long-standing, basic mode of communication that has many times provided essential communications during emergencies. If BPL creates significant interference, as indicated by tests run by the ARRL, the Amateur Radio population will dwindle away to nothing, leaving a gap in basic emergency communication. If BPL interferes with Radio Control model aircraft flight, that will create a serious risk to safety of those involved in the hobby and those near RC flying fields. Both of these activities are currently valid uses of the radio spectrum which provide recreation and livelihood to large portions of our population.
