

I just wanted to make a brief comment about this proposal. I am an active amateur (ham) radio operator (af4xk) and short wave radio listener. I am concerned that this proposal, if implemented, could cause excessive noise and interference on these radio frequencies.

The affects of BPL can be measured and observed. The ARRL and others have demonstrated this noise/interference problem and would be happy to demonstrate it to the FCC.

Power company promises to filter out interference are easy to make but not so easy to actually implement.

Please let something other than money determine the decision that is made. Amateur radio is after all the nations backup communications resource.

Thank you.

Charles A. Allen
