

I believe that sacrificing the Amateur Radio HF Spectrum for the sake of BPL is a very bad idea. Emergency communications in this country rely upon Amateur Radio Operators to pass traffic when no other communications can make it. Why would anyone put the safety and communication ability of this great nation at risk just to make money?? There are other ways to deploy Wireless Internet access to rural people that do not cause the terrible interference that BPL has the potential to cause. Please do not sacrifice the Radio Amateur Bands for the sake of money! That would be a far more costly mistake for America.
