

BPL is the worst RFI Trojan Horse I have seen in nearly 30 years of Electronics Industry employment. It is ironic, or dichotomous, that the FCC (who is eager to "launch" this RFI laden rocket) is giving BPL the "thumbs-up", while at the same time will be responsible for resolving the myriad of RFI issues that will arise from BPL's RF pollution.

The noise-floor on HF/VHF is ridiculous as is, and of course BPL will add its own special RF "signature" to increase RFI as well.

Frankly, no amount of "Political Purchasing" will silence the RFI produced by BPL, and it is disappointing that the Commission sworn to enforce, and uphold technical and spectral purity for all RF users, is embarking on such an ill-prepared RFI nightmare.

Sincerely,

Charles M. Dawson (KG5JJ)
