

I am very concerned about the proposed BPL. There is NO WAY that the FCC should allow for the power companies to do anything that will make more interference to previously liscensed radio broadcasters of any kind. BPL will interfere with all HF radio and this is just unacceptable to me. There are other ways to provide broadband to the people that do not interfere with established usage. This is the WRONG direction for the FCC to be going. I strongly oppose the move to BPL.
