

I wish to persuade the FCC from allowing BPL technology to be implemented. The destruction of international mass communications in the shortwave band will not only be robbing many hobbyist of their hobbies, it is also in violation of ITU laws that protect international broadcasters from interference or jamming. It will harm emergency communications on many levels. Amateur radio would be reduced to only people who can afford high-power transmitter which will only escalate more problems.

There are several technologies that make BPL unnecessary. BPL will not satisfy the demands of bandwidth for the masses or for the future. It will only slow the implementation of newer desired technologies that will solve these problems.

Please,
don't allow the 100 year old foundation for communication to be eroded to a useless level for a flash-in-the-pan unneeded and unwanted technology.

Sincerely,
Glenn Valenta
A shortwave hobbyist and network engineer
