

In the testing phase of BPL done in Cedar Rapids, it was very disruptive to communications on several Amateur radio bands. I don't think this is a good idea, and I can't imagine why anyone else would think it is. This technology will never be able to keep-up with the demands of the broadband being done over cable networks, nor could it possibly carry HDTV signals as proposed. There seems to be a push from within the administration to make this happen, even though most "experts" agree it is not necessary or even a good idea. It looks like a ploy to put money into the power industries and NOTHING else. Talk to your own people in the FCC who use radio communications. This is what you are supposed to be protecting!
