

I am very concerned about BPL and it's effect on Amateur Radio. September 11 demonstrated for us how very fragile cellular technology and land lines are. Amateur radio represent one of the most durable and disaster-proof modes of communication in existence. But BPL can ruin all of this. It's not just amateur radio operators that will suffer, it is all people affected by disaster. FEMA, Red Cross, and Salvation Army all rely on High Frequency Radio communications to carry on their life-saving operations. BPL can render this mode of communication useless. I beg you to reconsider.

Sincerely,

Laura Block, PharmD, KG4WQT

Member, GA-3 DMAT, NDMS Section of FEMA
