

Re: BPL - impact on radio communications

As tests and any sort of technical common sense would make obvious, broadband transmissions on miles of unshielded power lines will create havoc with the reception of micro-volt level radio communication signals. The concept is pure nonsense to anyone with a technical background. My BSEE (with communications specialization) and top FCC commercial and amateur radio licenses does not make me a great expert, but anyone with a comprehension of radio transmission and reception knows that the BPL concept does not work, unless basic MF & HF radio is sacrificed. BPL is a poorly thought out concept, with the unlikely potential for profit driving this otherwise unfathomable concept. Please get some honest technical input before allowing this BPL debacle to continue.

Sincerely, Andrew Kilpatrick
