

As an amateur radio operator I request that additional interference studies be conducted by the FCC in the proposed use of BPL (Broadband over Power Lines). I am especially concerned about the question of interference both hf and vhf, willful or otherwise, that will be and is currently being generated by experimental BPL programs.

I am also alarmed at the poor response by the involved companies and corporations to mitigate current interference in the hf and vhf bands.

Do not permit BPL until the interference questions are solved.
