

Greetings, As An Amateur Radio License Holder I am Opposed to the BPL system. As an Amateur Radio Operator I am required to maintain My radio equipment in accordance with FCC regulations. If the BPL system goes on line there is no guarantee that this system will not interfere with Amateur Radio, Public Service, Police, Fire, EMS, And Military Communications. Also there is no guarantee that these Radio Services will not interfere with the BPL service. This type of system has been tried out in other Countries and has shown not to be an efficient means of communication. With wireless systems operating at higher short range frequencies would be a better choice for this type of wireless Internet connection. The problems that would be caused by the BPL far outweigh the benefits. I would therefore advise against allowing the system to come online. Our National Security may be compromised if it does.

Sincerely:

Jeffrey W. Harshman, N2LXM
