

Commissioners,

Please register this as another vote against BPL. I am satisfied beyond a reasonable doubt that the technology is flawed and not usable in the US. I understand that President Bush wants broadband everywhere at any cost. A very viable alternative would be via microwave wireless technology in the 900mhz, 2.4Ghz, 5.2Ghz and 5.7Ghz range. Motorolas Canopy line of equipment comes to mind. The cost savings would be tremendous. The ends would be reached.

Thanks for your time.

Jay Urish W5GM
