

In Writing, I wish to persuade the FCC from allowing BPL to be implemented. The destruction or at the least, deterioration of the shortwave bands is not only a violation of ITU laws that protect international broadcasters from interference and jamming, it will be destroying many people's life hobby. Amateur radio will be reduced to users with high-power amplifiers and large antennas. Emergency communications will be hindered to levels directly responsible for the loss of life. Also, this will hinder military HF comms reducing national security

There are many technologies that make BPL unnecessary. BPL will never be able to carry the high bandwidth demands for mass distribution of video much less the up-and-coming HDTV.

I would point out the terrible record my power cimpany FPL has had taking care of their current system, I get high noise levles now. Because of leaky power lines lining our streets. Imagine when the line IS REALLY radiating a HF signal! Get the power companies to live up to what is already expected!

Thank You!
