

I ask the the FCC not allow the use of Broadband Over Power Lines (BPL) as it is currently desinged to operate. It would cause too much interference with the regulated spectrum creating potentially life threatenig situations. BPL should not be implemented because the damage it would cause far outweighs the good BPL would provide, both to those with alternative means of broadband access and even more so to those who do not have broadband access as these individuals usually live in areas more dependant on the regulated radio spectrum being clear of intereference.
