

BPL will seriously degrade the ability of many Amateur Radio operators as well as commercial and public service licensees to reliably and effectively provide communications in times of emergencies. BPL is a poorly thought out and significantly flawed technology that can only be forced to work at the cost of existing and future duly licensed services that have been and continue to be compliant with existing FCC rules. Many other ways exist to distribute broadband that do not sacrifice existing users. These other distribution methods, cable, dsl, wireless local access, etc., need to be expanded and BPL needs to be terminated as a bad idea based on flawed technology.

Thank you. James R. Barry W0IRE
