

Please do NOT allow BPL or anything like it to go forward. Doing so will effectively destroy all long-distance HF communications; including emergency locators, military comms, ham-radio, shortwave broadcast, and many many other useful services.

All for a ridiculous proposal that's obsolete before it even gets started. BPL has no hope of handling the bandwidth requirements of modern computing; and should be immediately scrapped.

Further, the FCC has a legal obligation to adhere to ITU rules, and allowing BPL to go forward will be a direct violation of those obligations.

thank you
